OFFICE OF ENERGY PROJECTS

Project No. 1390-069 – California
Lundy Hydroelectric Project
Southern California Edison Company

VIA FERC Service

Subject: Scoping Document 1 for the Lundy Hydroelectric Project

To the Parties Addressed:

The Federal Energy Regulatory Commission (Commission) is currently reviewing the Pre-Application Document submitted by Southern California Edison for relicensing the Lundy Hydroelectric Project (Lundy Project) (FERC No. 1390). The project is located on Mill Creek, approximately 7.6 miles northwest of Lee Vining, in Mono County, California. The project is also partly located on federal land within the Inyo National Forest managed by the Forest Service and federal land administered by Bureau of Land Management (BLM).

Pursuant to the National Environmental Policy Act (NEPA) of 1969, as amended, Commission staff will prepare either an environmental assessment or an environmental impact statement (collectively referred to as the “NEPA document”), which will be used by the Commission to determine whether, and under what conditions, to issue a new license for the project. To support and assist our environmental review, we are beginning the public scoping process to ensure that all pertinent issues are identified and analyzed, and that the NEPA document is thorough and balanced.

We invite your participation in the scoping process and are circulating the attached Scoping Document 1 (SD1) to provide you with information on the Lundy Project. We are also soliciting your comments and suggestions on our preliminary list of issues and alternatives to be addressed in the NEPA document. Additionally, we are requesting that you identify any studies that would help provide a framework for collecting pertinent information on the resource areas under consideration necessary for the Commission to prepare the NEPA document for the project.

We will hold two scoping meetings for the Lundy Project to receive input on the scope of the NEPA document. An evening meeting will be held from 6:00 p.m. – 8:00 p.m. on Tuesday May 14th, at the Lee Vining Community Center in Lee Vining,

Project No. 1390-069

California. A daytime meeting will be held from 2:00 p.m. – 5:00 p.m. on Wednesday May 15th at the same location. We will also visit the project facilities on May 15th starting at 8:30 a.m.

We invite interested agencies, Indian tribes, non-governmental organizations, and individuals to attend one or both meetings and participate in the environmental site review. Further information on our scoping meetings and environmental site review is contained in the enclosed SD1.

SD1 is being distributed to both SCE's distribution list and the Commission's official mailing list for the project (see Section 9.0, *Mailing List* of the attached SD1). If you wish to be added to or removed from the Commission's official mailing list, please send your request by email to efiling@ferc.gov or by mail. Submissions sent via the U.S. Postal Service must be addressed to: Debbie-Anne Reese, Acting Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Debbie-Anne Reese, Acting Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852. All written or emailed requests must specify your wish to be added to or removed from the mailing list and must clearly identify the following on the first page: **Lundy Hydroelectric Project No. 1390-069.**

Please review SD1 and, if you wish to provide comments, follow the instructions in Section 6.0, *Request for Information and Studies*. The Commission strongly encourages electronic filings. If you have any questions about SD1, the scoping process, or how Commission staff will develop the NEPA document for this project, please contact Jessica Fefer, the Commission's relicensing coordinator for the project, at (202) 502-6631 or jessica.fefer@ferc.gov. Additional information about the Commission's licensing process and the project may be obtained from our website, www.ferc.gov. The deadline for filing comments is June 24, 2024. The Commission strongly encourages electronic filings.

SCOPING DOCUMENT 1

1.0 INTRODUCTION

The Federal Energy Regulatory Commission (Commission or FERC), under the authority of the Federal Power Act (FPA),¹ may issue licenses for terms ranging from 30 to 50 years for the continued operation, and maintenance of non-federal hydroelectric projects. On February 23, 2024, Southern California Edison Company (SCE) filed a Pre-

¹ 16 U.S.C. § 791(a)-825(r).

Application Document (PAD) and Notice of Intent (NOI) to seek a new license for the Lundy Hydroelectric Project (Lundy Project or project) (FERC Project No. 1390).²

The Lundy Project is located on the eastern slope of the Sierra Nevada along Mill Creek, approximately 7.6 miles northwest of Lee Vining, in Mono County, California. The project is situated on Mill Creek, partly within Inyo National Forest, managed by the United States Forest Service (Forest Service), and partly on federal lands administered by the Bureau of Land Management (BLM). The remaining project lands are privately owned by SCE. The total installed capacity of the project powerhouse is 3-megawatts (MW) and the average annual generation from 2013-2022 was 7,458 megawatt-hours. Section 3.0, *Proposed Actions and Alternatives* provides a detailed description of the project, and figure 1 shows the project location and the primary project facilities.

The National Environmental Policy Act (NEPA) of 1969,³ the Commission's regulations, and other applicable laws require that we independently evaluate the environmental effects of relicensing the project as proposed and consider reasonable alternatives. We will prepare an environmental assessment (EA) or an environmental impact statement (EIS) (collectively referred to as the "NEPA document") that describes and evaluates the probable effects, if any, of the licensee's proposed action and alternatives. The Commission's scoping process will help determine the required level of analysis and satisfy the NEPA scoping requirements, irrespective of whether the Commission issues an EA or an EIS.

² The current license for the project was issued on March 3, 1999 and the license expires on February 28, 2029.

³ 42 U.S.C. §§ 4321-4370(f).

Figure 1. Location and project facilities for the Lundy Project (Source: SCE’s PAD).

2.0 SCOPING

This Scoping Document 1 (SD1) is intended to advise all participants as to the proposed scope of the Commission's NEPA document and to seek additional information pertinent to this analysis. This document contains: (1) a description of the scoping process and current processing schedule for the license application; (2) a description of the licensee's proposed action and alternatives; (3) a preliminary identification of environmental issues and proposed studies; (4) a request for comments and information; and (5) a preliminary list of comprehensive plans that are applicable to the project.

2.1 PURPOSES OF SCOPING

Scoping is the process used to identify issues, concerns, and opportunities for enhancement or mitigation associated with a proposed action. According to NEPA, scoping should be conducted during the early planning stages of a project. The purposes of the scoping process are as follows:

- invite participation of federal, state, and local resource agencies; Indian tribes; non-governmental organizations (NGOs); and the public to identify significant environmental and socioeconomic issues related to the proposed project;
- determine the resource issues, depth of analysis, and significance of issues to be addressed in the NEPA document;
- identify reasonable alternatives to the proposed action that should be evaluated in the NEPA document;
- identify how the project would or would not contribute to cumulative effects in the project area;
- solicit, from participants, available information on the resources at issue, including existing information and study needs; and
- determine the resource areas and potential issues that do not require detailed analysis during review of the project.

2.2 COMMENTS, SCOPING MEETINGS, AND ENVIRONMENTAL SITE REVIEW

During the preparation of the NEPA document, there will be several opportunities for the resource agencies, Indian tribes, NGOs, and the public to provide input. These opportunities will occur:

- during the public scoping process and study plan meetings, when we solicit written comments regarding the scope of the issues and analysis for the NEPA document;
- in response to the Commission’s notice that the project is ready for environmental analysis; and
- after issuance of the NEPA document when we solicit written comments on the document.

In addition to written comments solicited by this SD1, we will hold two public scoping meetings near the project and an environmental site review of the project. The daytime meeting will focus on concerns of the resource agencies, NGOs, and Indian tribes, and an evening meeting will focus on receiving input from the public. We invite all interested agencies, Indian tribes, NGOs, and individuals to attend one or both meetings to assist us in identifying the scope of environmental issues that should be analyzed in the NEPA document. All interested parties are also invited to participate in the environmental site review. The times and locations of the meetings and environmental site review are as follows:

<p>Meeting for the general public:</p> <p>Tuesday, May 14, 2024 6:00 p.m. – 8:00 p.m. PST</p> <p>Lee Vining Community Center 296 Mattly Ave Lee Vining, CA 93541</p>
<p>Environmental Site Review</p> <p>Wednesday, May 15, 2024 8:30 a.m. – 12:00 p.m. PST</p> <p>Gus Hess Community Park 129 Mattly Ave Lee Vining, CA 93541</p>

Meeting for resource agencies, Tribes, and NGOs:

Wednesday, May 15, 2024

2:00 p.m. - 5:00 p.m. PST

Lee Vining Community Center

296 Mattly Ave

Lee Vining, CA 93541

Please RSVP to Matthew Woodhall of SCE at Matthew.Woodhall@sce.com (preferably) or (626) 302-9596 on or before Friday, May 8, 2024, if you would like to attend the environmental site review. Individuals attending the tour must wear long pants and sturdy, closed-toe shoes.

Commission staff will moderate the scoping meetings. The meetings will be recorded by an independent court reporter, and all statements (oral and written) will become part of the Commission's public record for the project. Before each meeting, all individuals who attend, especially those who intend to make statements, will be asked to sign in and clearly identify themselves for the record. Interested parties who choose not to speak or who are unable to attend the scoping meetings may provide written comments and information to the Commission as described in section 6.0 of this scoping document. These meetings, along with other related information, are posted on the Commission's calendar at <https://www.ferc.gov/news-events/events>.

Meeting participants should come prepared to discuss their issues and/or concerns as they pertain to the relicensing of the Lundy Project. It is advised that commenters review the PAD⁴ in preparation for the scoping meetings. The PAD may also be viewed on the Commission's website (<http://www.ferc.gov>), using the "eLibrary" link and entering the docket number P-1390 to access the document. For assistance, contact FERC Online Support at FERCOnlineSupport@ferc.gov, or toll free at 1-866-208-3676, or for TTY, (202) 502-8659. A copy of the PAD can also be obtained from SCE's Project website (<https://www.sce.com/regulatory/hydro-licensing/lundy-hydroelectric-project>) or can be inspected and reproduced, by appointment, at the following address: 1515 Walnut Grove Ave. Rosemead, CA 91770. The public may contact Matthew Woodhall by telephone at 626-302-9596 to make an appointment to review the information.

⁴ The PAD can be accessed on the Commission's eLibrary system at: https://elibrary.ferc.gov/eLibrary/filelist?accession_number=20240223-5045&optimized=false.

Following the scoping meetings and comment period, all issues raised will be reviewed and decisions made as to the level of analysis needed. If preliminary analysis indicates that any issues presented in this scoping document have little potential for causing significant effects, the issue(s) will be identified and the reasons for not providing a more detailed analysis will be given in the NEPA document.

If we receive no substantive comments on SD1, then we will not prepare a Scoping Document 2 (SD2). Otherwise, we will issue a SD2 to address any substantive comments received. The SD2 will be issued for informational purposes only; no response will be required. The NEPA document will address recommendations and input received during the scoping process.

3.0 PROPOSED ACTION AND ALTERNATIVES

In accordance with NEPA, the environmental analysis will consider the following alternatives, at a minimum: (1) the no-action alternative, (2) SCE's proposed action, and (3) alternatives to the proposed action.

3.1 NO-ACTION ALTERNATIVE

Under the no-action alternative, the Lundy Project would continue to operate as required by the current project license (i.e., there would be no change to the existing environment). No new environmental protection, mitigation, or enhancement measures would be implemented. We use this alternative to establish baseline environmental conditions for comparison with other alternatives.

3.1.1 Existing Project Facilities

The major project facilities include Lundy Lake, Lundy Dam, a flowline consisting of pipeline and penstock, Lundy Powerhouse, and transmission facilities.

Lundy Lake and Dam

Lundy Lake is a 132-acre reservoir with a usable storage capacity of 4,029 feet at a water surface elevation of 7,807.81 feet National Geodetic Vertical Datum of 1929 (NGVD29). Lundy Lake is generally drawn down in the winter to allow storage capacity for spring runoff and has a drainage area of approximately 20 square miles.

Lundy Dam is a 690-foot-long, 48-foot-high dumped gravel and rockfill dam with a concrete core wall that has a crest elevation of 7,815.5 feet. The dam includes a 150-foot-long spillway that has a crest elevation of 7807.8 feet. The dam outlet works consist of a reinforced concrete structure equipped with trash racks and a 54-inch-diameter steel pipe about 140 feet long, which transitions to a 130-foot-long, 50-inch diameter steel pipe. These pipes are encased in concrete at the dam foundation level. A 50-inch manually operated gate valve is located in this pipe about 164 feet downstream of the intake.

Flowline

The flowline consists of an approximately 12,053-foot-long, 48-inch-diameter welded steel pipe connecting the outlet work pipes to a 3,500-foot-long riveted steel pipe (penstock). The penstock varies in diameter from 30 to 36 inches and increasing to 40 inches for the last 700 feet approaching the powerhouse. At the powerhouse, the penstock bifurcates into two 22-inch-diameter pipes connecting to each turbine. The water conduit is designed to carry approximately 70 cfs under optimum conditions.

Powerhouse and Switchyard

The Lundy Powerhouse is a reinforced concrete building constructed in 1911 and is located on Wilson Creek, downstream of Lundy Lake. The powerhouse contains two Canyon Pelton-type turbines, each directly connected to an Allis Chalmers generator rated at 1,500 kW. The powerhouse's hydraulic capacity is sized to handle 70 cfs; however, SCE does not utilize this full capacity except during wet water years (Table 2). Water discharged from the powerhouse tailrace may serve water rights on the existing water delivery system, referred to as the Wilson System or the Upper Conway System, which extends generally north and northwest and dispenses into Mono Lake. Tailrace water can also be directed at the splitter box into Mill Creek (4 miles upstream of Mono Lake) through the Mill Creek Return Ditch (MCRD) to meet water rights obligations and be returned to Mill Creek. The splitter box redirects flow to the Wilson System through a Langemann gate, and two motor-operated valves control releases to the MCRD.

The switchyard (non-project) is located adjacent to the powerhouse. A wood pole switchrack supports the 55-kV bus. Fuse disconnect switches, grounding switches, single-phase lighting arrestors, potential devices, and other project-related equipment are located at the switchyard.

Transmission Facilities

The primary transmission line is a 15-foot-long, 2.4-kV transmission line that extends from the powerhouse to the No. 1 transformer located in the non-project switchyard, where it joins the transmission and distribution system.

Gaging Stations and Measurements

There are three gages that have been actively collecting data in compliance with the Stream Gaging Plan required by the current license (plan approved by FERC in 2008). The gages are located at Mill Creek below Lundy Dam, Mill Creek below Lundy Dam Instream Flow Release, and in Lundy Lake Reservoir. These gages are published by the USGS but are owned by SCE. With these gages, SCE has been monitoring and measuring: (1) the minimum flow release to Mill Creek below Lundy Dam, (2) the total flow in Mill Creek below Lundy Dam, and (3) Lundy Lake elevations. In an order dated 2023⁵, FERC approved a revised plan and additional gages to include additional monitoring and measuring of flow at the: (1) Lundy Powerhouse Tailrace, (2) Upper

⁵ Order Approving Revised Streamflow Gaging Plan Pursuant to Article 412 (184 FERC ¶ 62,117).

Conway Ditch, (6) splitter box releases to the Wilson System; and (7) MCRD near the confluence with Mill Creek. These additional gages are now active.

Access Roads and Trails

The project includes a project access road to the flowline from Lundy Lake Road as part of the Project boundary. SCE also uses portions of certain public roads (e.g., Lundy Lake Road, Lundy Dam Road, and Mill Creek Powerhouse Road) for access to Lundy Project facilities. Portions of these roads are also used by the public to access recreation sites not included as part of the Lundy Project. Other minor access roads and foot trails within the current project boundary are used by SCE staff to access project-related facilities.

3.1.2 Existing Project Operation

The project is operated in compliance with existing regulatory requirements, agreements, and water rights to generate power.

Water Management

Lundy Project Watershed Overview

The Lundy Project is located within the Mono Lake subbasin in the Northern Mojave-Mono Lake Subregion of the eastern Sierra Nevada. Approximately 24.2 square miles of the project is in the “Mill Creek” subwatershed, and 18.8 square miles of the project is in the “Wilson Creek” subwatershed. Deer Creek⁶, also located within the Mill Creek subwatershed, is the largest tributary to Mill Creek downstream of Lundy Lake and is a significant sediment source to Mill Creek. There are no impoundments on Mill Creek upstream of the project and while there are some irrigation diversions located downstream of the project, they are not used unless needed when the project is offline. The primary uses of water within Mill Creek are irrigation of pastureland for livestock and power generation.

The Lundy Project creates the 132-acre Lundy Lake by impounding and temporarily retaining flows on Mill Creek. Lundy Lake is located on Mill Creek, 7-miles upstream of where the creek enters Mono Lake, and has historically been drawn down in the winter to provide storage capacity for spring runoff. Minimum flows are provided into Mill Creek from the dam through: (1) an instream acoustic velocity meter (AVM) release structure (up to 1.25 cfs); (2) a “rock-drop” valve in the same area that provides

⁶ Deer Creek is a perennial stream that flows along a normal fault south of Lundy Lake and enters Mill Creek just downstream of Lundy Dam.

additional flows up to 12 cfs; or (3) a “farmer’s gate” in the dam that can only operate above an invert of 7,779 feet. The farmer’s gate is typically used in wet water years for flows exceeding the required daily water rights.

The flowline and penstock convey a maximum of 70 cfs from Lundy Lake approximately 12,053 feet to the powerhouse and tailrace. At the end of the tailrace, a “splitter box” directs water to either the Wilson System or back to Mill Creek via the MCRD⁷ to comply with the Mill Creek Water Rights.

Water Rights

SCE operates the project to comply with the Mill Creek Water Rights, which were adjudicated in Mono County Superior Court on November 30, 1914 (table 1). SCE has a non-consumptive water right (pass-through) for hydropower generation on Mill Creek. SCE’s operations rely on an Annual Operations Plan that utilizes the Mill Creek Accounting and Planning Tool (MCAPT) and forecast methodology that has been developed with the water rights holders and memorialized in a Settlement Agreement (SCE et al., 2004) and Amended Settlement Agreement (SCE et al., 2022). The MCAPT integrates forecasted and observed run off quantities with the water rights priorities to develop a schedule for Mill Creek water diversions and deliveries.

⁷ An additional conveyance of the Wilson System water rights is available through the Upper Conway Ditch. A radial gate at upstream end of the tailrace diverts water when called for into this system.

Table 1. Summary of Present-Day Mill Creek Adjudicated Water Rights

Priority Right	Right Holder⁸	Quantity of Right (cfs)⁹	Cumulative LADWP	Cumulative Conway (Mono Co.)	Cumulative Total

Notes: An asterisk (*) indicates exercise of Mill Creek rights in the Wilson System when called on.

The Rights Holders identified are the present-day successors in interest to the parties identified in the Mill Creek Adjudication.

⁸ Rights Holders are identified as follows:

LADWP: City of Los Angeles, Department of Water and Power

BLM: United States Department of Interior, Bureau of Land Management

Simis: J.O. Simis, private landowner

USFS: United States Forest Service

⁹ Quantity of rights measured in cubic feet per second (cfs)

Project Generation and Outflow Records

Average annual and monthly energy production for current operations of the Lundy Project (2013-2022) are summarized in Table 2. During this period, annual generation ranged from 4,116 megawatt-hours (MWh) to 16,766 MWh (SCE, 2022). A summary of Lundy Project generation and outflow records for operations (annually and quarterly) for the 5 years preceding filing the PAD (2018-2022) is included in Table 3.

Table 2. Average Annual and Monthly MWh Generation (2013-2022)

Year	Jan	Feb	Mar	April	May	June	Jul	Aug	Sept	Oct	Nov	Dec	Annual Total

3.2 SCE'S PROPOSAL

3.2.1 Proposed Project Facilities and Operations

The proposed action is to continue to operate and maintain the project as required by the existing license. No new or upgraded facilities, structural changes, or operational changes to the project are proposed by SCE at this time.

3.2.2 Proposed Environmental Measures

There are no environmental measures proposed by SCE at this time.

3.3 DAM SAFETY

It is important to note that dam safety constraints may exist and should be taken into consideration in the development of proposals and alternatives considered in the pending proceeding. For example, proposed modifications to the dam structure, such as the addition of flashboards or fish passage facilities, could impact the integrity of the dam structure. As the proposal and alternatives are developed, the applicant must evaluate the effects and ensure that the project would meet the Commission's dam safety criteria found in Part 12 of the Commission's regulations and the Engineering Guidelines (<http://www.ferc.gov/industries/hydropower/safety/guidelines/eng-guide.asp>).

3.4 ALTERNATIVES TO THE PROPOSED ACTION

Commission staff will consider and assess all alternative recommendations for operational or facility modifications, as well as protection, mitigation, and enhancement measures identified by the Commission, agencies, Indian tribes, NGOs, and the public.

3.5 ALTERNATIVES CONSIDERED BUT ELIMINATED FROM DETAILED STUDY

At present, we propose to eliminate the following alternatives from detailed study in the NEPA document.

3.5.1 Federal Government Takeover

In accordance with § 16.14 of the Commission's regulations, a federal department or agency may file a recommendation that the United States exercise its right to take over a hydroelectric power project with a license that is subject to Sections 14 and 15 of the FPA.¹⁰ We do not consider federal takeover to be a reasonable alternative. Federal takeover of the project would require congressional approval. While that fact alone would not preclude further consideration of this alternative, there is currently no evidence showing that federal takeover should be recommended to Congress. No party has suggested that federal takeover would be appropriate, and no federal agency has expressed interest in operating the project.

¹⁰ 16 U.S.C. §§ 791(a)-825(r).

3.5.2 Non-power License

A non-power license is a temporary license the Commission would terminate whenever it determines that another governmental agency is authorized and willing to assume regulatory authority and supervision over the lands and facilities covered by the non-power license. At this time, no governmental agency has suggested a willingness or ability to take over the project. No party has sought a non-power license, and we have no basis for concluding that the Lundy Project should no longer be used to produce power. Thus, we do not consider a non-power license a reasonable alternative to relicensing the project.

3.5.3 Project Decommissioning

As the Commission has previously held, decommissioning is not a reasonable alternative to relicensing in most cases.¹¹ Decommissioning can be accomplished in different ways depending on the project, its environment, and the particular resource needs.¹² For these reasons, the Commission does not speculate about possible decommissioning measures at the time of relicensing, but rather waits until an applicant actually proposes to decommission a project, or a participant in a relicensing proceeding demonstrates that there are serious resource concerns that cannot be addressed with appropriate license measures and that make decommissioning a reasonable alternative.¹³ SCE does not propose decommissioning, nor does the record to date demonstrate there are serious resource concerns that cannot be mitigated if the project is relicensed; as such, there is no reason, at this time, to include decommissioning as a reasonable alternative to be evaluated and studied as part of staff's NEPA analysis.

¹¹ See, e.g., *Eagle Crest Energy Co.*, 153 FERC ¶ 61,058, at P 67 (2015); *Public Utility District No. 1 of Pend Oreille County*, 112 FERC ¶ 61,055, at P 82 (2005); *Midwest Hydro, Inc.*, 111 FERC ¶ 61,327, at PP 35-38 (2005).

¹² In the unlikely event that the Commission denies relicensing a project or a licensee decides to surrender an existing project, the Commission must approve a surrender "upon such conditions with respect to the disposition of such works as may be determined by the Commission." 18 C.F.R. § 6.2 (2020). This can include simply shutting down the power operations, removing all or parts of the project (including the dam), or restoring the site to its pre-project condition.

¹³ See generally *Project Decommissioning at Relicensing*; Policy Statement, FERC Stats. & Regs., Regulations Preambles (1991-1996), ¶ 31,011 (1994); see also *City of Tacoma, Washington*, 110 FERC ¶ 61,140 (2005) (finding that unless and until the Commission has a specific decommissioning proposal, any further environmental analysis of the effects of project decommissioning would be both premature and speculative).

4.0 SCOPE OF CUMULATIVE EFFECTS AND SITE-SPECIFIC RESOURCE ISSUES

4.1 CUMULATIVE EFFECTS

According to the Council on Environmental Quality's regulations for implementing NEPA (40 C.F.R. 1508.7), a cumulative effect is the effect on the environment that results from the incremental effect of the action when added to other past, present, and reasonably foreseeable future actions, regardless of what agency (federal or non-federal) or person undertakes such other actions. Cumulative effects can result from individually minor but collectively significant actions taking place over a period of time, including hydropower and other land and water development activities.

4.1.1 Resources that could be Cumulatively Affected

Based on information in the PAD for the Lundy Project, and preliminary staff analysis, we have identified water quantity and quality, and aquatic species and their habitats as resources that could be cumulatively affected by the proposed continued operation and maintenance of the Lundy Project.

4.1.2 Geographic Scope

Our geographic scope of analysis for cumulatively affected resources is defined by the physical limits or boundaries of: (1) the proposed action's effect on the resources, and (2) contributing effects from other hydropower and non-hydropower activities within the Mono Lake Subbasin. We have identified the geographic scope for water quantity and quality to include Lundy Lake and Mill Creek to Mono Lake, all within the Mono Lake Subbasin. We chose this geographic scope because the operation and maintenance of the Lundy Project, in combination with other hydroelectric projects in the Mono Lake Subbasin may affect water quality of Mill Creek.

4.1.3 Temporal Scope

The temporal scope of our cumulative effects analysis in the EA will include a discussion of past, present, and reasonably foreseeable future actions and their effects on each resource that could be cumulatively affected. Based on the potential term of a new license, the temporal scope will look 30 to 50 years into the future, concentrating on the effect on the resources from reasonably foreseeable future actions. The historical discussion will, by necessity, be limited to the amount of available information for each resource. The quality and quantity of information, however, diminishes as we analyze resources further away in time from the present.

4.2. RESOURCE ISSUES

In this section, we present a preliminary list of potential environmental issues to be addressed in the NEPA document. We identified these issues, which are listed by resource area, by reviewing the PAD and the Commission's public record for the Lundy Project. This list is not intended to be exhaustive or final, but contains the issues raised to date. After the scoping process is complete, we will review the list and determine the appropriate level of analysis needed to address each issue in the NEPA document. Those issues identified by an asterisk (*) will be analyzed for both cumulative and site-specific effects.

4.2.1 Geologic and Soils Resources

- Effects of continued project operation on shoreline erosion and sediment transport downstream Mill Creek.
- Potential effects of sediment movement from or within Deer Creek to the project shorelines and streambanks along Mill Creek.
- Effects of hillslope erosion downstream of Lundy Lake and Deer Creek.

4.2.2 Water Resources

- Effects of continued project operation on water quality downstream of the powerhouse. *
- Effects of continued project operation on water quality in Lundy Lake. *
- Effects of continued project operation on downstream water rights and users. *
- Effects of continued project operation on water quality in the project bypassed reach and downstream of the powerhouse. *

4.2.3 Aquatic Resources

- Effects of continued project operation on fish habitat and fish resources in the project impoundment, bypassed reach, and downstream of the powerhouse. *
- Effects of fish entrainment at the Lundy powerhouse on fish resources in the project area. Effects of continued project operation on fish stranding. *
- Effects of project water diversions and instream flow on fish habitat in the project bypassed reach. *

- Effects of continued operation on aquatic invertebrates downstream of the Lundy dam. *

4.2.4 Terrestrial Resources

- Effects of continued operations and maintenance on special-status botanical resources.
- Effects of the introduction and/or spread of invasive plant populations potentially occurring due to maintenance activities.
- Effects of continued operations and maintenance on special-status wildlife species.
- Effects of continued project operation and maintenance activities including vegetation management and herbicide use on native vegetation and wildlife, game species, and the special-status species identified in SCE's PAD,¹⁴ including Inyo National Forest Species of Conservation Concern and nesting migratory bird species.¹⁵

4.2.5 Threatened and Endangered Species

- Effects of continued project operation and maintenance activities on species designated as federally threatened, endangered, proposed, or candidates for listing, and designated critical habitat (proposed and final), under the

¹⁴ Sections 5.4.4 *Special-status Plant Species*, 5.5.4 *Special-status Wildlife*, and 5.7.4 *Special-status Species* of the PAD describe the special-status species known to occur or that may potentially occur in the vicinity of the project. ¹⁵ Migratory birds include any species protected under the Migratory Bird Treaty Act (50 CFR 10.13).¹⁶ On April 2, 2024, staff accessed the U.S. Fish and Wildlife Service's Information for Planning and Consultation system to generate the official list of species and critical habitat designated under the ESA potentially affected by the project. The list can be accessed on the Commission's public record for the project at: https://elibrary.ferc.gov/eLibrary/filelist?accession_num=20240402-3058.

¹⁵ Migratory birds include any species protected under the Migratory Bird Treaty Act (50 CFR 10.13).¹⁶ On April 2, 2024, staff accessed the U.S. Fish and Wildlife Service's Information for Planning and Consultation system to generate the official list of species and critical habitat designated under the ESA potentially affected by the project. The list can be accessed on the Commission's public record for the project at: https://elibrary.ferc.gov/eLibrary/filelist?accession_num=20240402-3058.

Endangered Species Act (ESA), including the species and critical habitats listed below.¹⁶

Endangered Species: Sierra Nevada bighorn sheep (*Ovis canadensis sierrae*), Sierra Nevada red fox (*Vulpes vulpes necator*), foothill yellow-legged frog (*Rana boylei*), Sierra Nevada yellow-legged frog (*Rana sierrae*)

Threatened Species: North American wolverine (*Gulo gulo luscus*), yellow-billed cuckoo (*Coccyzus americanus*), whitebark pine (*Pinus albicaulis*)

Proposed Threatened Species: greater sage-grouse (*Centrocercus urophasianus*), northwestern pond turtle (*Actinemys marmorata*)

Candidate Species: Monarch butterfly (*Danaus plexippus*)

Final Critical Habitat: There is final critical habitat designated for Sierra Nevada bighorn sheep, yellow-billed cuckoo, and Sierra Nevada yellow-legged frog. Final critical habitat for the Sierra Nevada bighorn sheep is within the project boundary.

Proposed Critical Habitat: There is proposed critical habitat for greater sage-grouse located within the project boundary.

4.2.6 Recreation Resources

- Effects of continued project operation and maintenance on recreation resources.
- Adequacy of existing recreation facilities to meet current and future recreation demand.

4.2.7 Land Use and Aesthetic Resources

¹⁶ On April 2, 2024, staff accessed the U.S. Fish and Wildlife Service's Information for Planning and Consultation system to generate the official list of species and critical habitat designated under the ESA potentially affected by the project. The list can be accessed on the Commission's public record for the project at: https://elibrary.ferc.gov/eLibrary/filelist?accession_num=20240402-3058.

- Effects of continued project operation and maintenance on land use.
- Effects of continued project operation and maintenance on the aesthetic quality of the project area.

4.2.8 Cultural and Tribal Resources

- Effects of continued project operation and maintenance on historic or archaeological resources, and traditional cultural properties that may be eligible for inclusion in the National Register of Historic Places, or on other areas or places of religious, cultural, and traditional importance to Indian tribes.

4.2.9 Socioeconomics

- Effects of continued project operations and flow diversions on agriculture and other consumptive uses in Mono City.
- Effects of any reduction in the amount of water available for irrigation on agricultural production and pastureland for livestock in Mono Lake watershed.

4.2.10 Environmental Justice

- Effects of project operation and maintenance of identified environmental justice communities.

5.0 PROPOSED STUDIES

Depending upon the findings of studies completed by SCE and the recommendations of the consulted entities, SCE will consider, and may propose certain other measures to enhance environmental resources affected by the project as part of the proposed action. SCE’s initial study proposals are identified by resource area in Table 4. Detailed information on SCE’s initial study proposals can be found in the PAD. Further studies may need to be added to this list based on comments provided to the Commission and SCE from interested participants, including Indian tribes.

Table 4. SCE’s initial study proposals for the Lundy Project (Source: SCE’s PAD, Section 6, *Preliminary Issues and Studies List for each Resource Area*, modified by staff).

PROPOSED STUDIES
Aquatic Resources
Study WQ 1 – Water Quality Monitoring: SCE proposes to: (1) assess water quality within Lundy Project affected stream reaches, and within Lundy Lake; and (2) provide data to inform CWA 401 water quality compliance with Basin Plan objectives.
Study WQ 2 – Water Temperature Monitoring: SCE proposes to: (1) assess water temperature within Lundy Project affected streams, and within Lundy Lake; and (2) provide data to inform CWA 401 water quality compliance with Basin Plan objectives.
Study AQ 1 – Fish Community Survey: SCE proposes to assess species composition, distribution, abundance, and age of fish communities in Lundy Lake and affected stream reaches.
Study AQ 2 – Fish Stranding Study: SCE proposes to evaluate stranding risk through the bypassed reach.
Terrestrial Resources
Study TERR 1 – Botanical: SCE proposes to document: (1) determine the presence and status and distribution of special status plants and invasive weeds; (2) map plant communities in the study area; and (3) characterize riparian and wet meadow vegetation in the study area and along Mill Creek.
Study TERR 2 – Wildlife: SCE proposes to: (1) determine the presence and distribution of special-status wildlife; and (2) document and characterize wildlife that use Mill Creek.

Recreation Resources
Study REC-1 – Recreation Use and Needs Assessment: SCE proposes to: (1) evaluate recreation use at the FERC-approved project recreation sites; and (2) assess the amount of use each site is receiving (including percent capacity) and the recreation activities that occur at each site.
Study REC-2 - Recreation Facilities Condition Assessment: SCE proposes to conduct an inventory of and map of existing FERC-approved project recreation sites, including locations, facilities/amenities, general condition, ownership, and management responsibilities.
Cultural and Tribal Resources
Study CUL-1 - Archaeology: SCE proposes to: (1) conduct additional background archival research of the study area; (2) identify and document archeological resources within or immediately adjacent to the Area of Potential Effects (APE); and (3) develop information sufficient for a Historic Properties Management Plan (HPMP).
Study CUL-2 – Built Environment: SCE propose to: (1) conduct additional background archival research of the study area; (2) identify and document built-environment resources within or immediately adjacent to the APE; and (3) develop information sufficient for the HPMP.
Study TRI 1 – Tribal Resources: SCE proposes to: (1) conduct background archival research of the study area; (2) identify and document tribal resources identified within or immediately adjacent to the APE; (3) conduct a thorough Native American ethnographic/ethnohistoric survey of the APE; (4) conduct interviews with knowledgeable informants; and (5) develop information sufficient for the HPMP.

6.0 REQUEST FOR INFORMATION AND STUDIES

We are asking federal, state, and local resource agencies, Indian tribes, NGOs, and the public to file with the Commission any information that will assist us in conducting an accurate and thorough analysis of the project-specific and cumulative effects associated with relicensing the Lundy Project. The types of information we request includes, but are not limited to:

- information, quantitative data, or professional opinions that may help define the scope of the analysis, and that helps identify significant environmental issues;
- identification of, and information from, any EA, EIS, or similar environmental study/report (previous, on-going, or planned) relevant to the proposed relicensing of the Lundy Project;
- existing information and any data that would help characterize environmental conditions, habitats, and effects of the project on environmental and socioeconomic resources;
- the identification of any federal, state, local resource plans, or documentation showing why any resources should be excluded from further study or consideration; and
- study requests by federal and state agencies, local agencies, Indian tribes, NGOs, and the public that would help provide a framework for collecting pertinent information on the resource areas under consideration necessary for the Commission to prepare the NEPA document for the project.

All requests for studies filed with the Commission must meet the criteria found in Appendix B, *Study Plan Criteria*.

The requested information, comments, and study requests should be submitted to the Commission **no later than June 24, 2024**¹⁷. All filings must clearly identify the

¹⁷ The Commission's Rules of Practice and Procedure provide that if a filing deadline falls on a Saturday, Sunday, holiday, or other day when the Commission is closed for business, the filing deadline does not end until the close of business on the next business day. 18 C.F.R. § 385.2007(a)(2) (2022). Because the filing deadline falls on a Saturday (*i.e.*, June 22, 2024), the filing deadline is extended until the close of business on Monday, June 24, 2024.

following on the first page: **Lundy Hydroelectric Project (P-1390-069)**. Scoping comments may be filed electronically via the Internet. See 18 C.F.R. 385.2001(a)(1)(iii) and the instructions on the Commission's website <https://ferconline.ferc.gov/FERCOOnline.aspx>. Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at <https://ferconline.ferc.gov/QuickComment.aspx>. You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at FERCOOnlineSupport@ferc.gov or toll free at 1-866-208-3676, or for TTY, (202) 502-8659. Although the Commission strongly encourages electronic filing, documents may also be paper-filed. To paper-file, mail an original and five copies. Submissions sent via the U.S. Postal Service must be addressed to: Debbie-Anne Reese, Acting Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Kimberly D. Bose, Debbie-Anne Reese, Acting Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852.

Register online at <https://ferconline.ferc.gov/FERCOOnline.aspx> to be notified via email of new filings and issuances related to these or other pending projects. For assistance, please contact FERC Online Support [mailto: ferconlinesupport@ferc.gov](mailto:ferconlinesupport@ferc.gov).

Any questions concerning the scoping process or how to file written comments with the Commission should be directed to Jessica Fefer, the Commission's relicensing coordinator for the Lundy Project, at (202) 502-6631 or jessica.fefer@ferc.gov. Additional information about the Commission's licensing process and the Lundy Project may be obtained from the Commission's website, www.ferc.gov.

7.0 CURRENT PROCESSING SCHEDULE

The decision on whether to prepare an EA or EIS will be determined after the license application is filed and we fully understand the scope of effects and measures under consideration. The NEPA document will be distributed to all persons and entities on the Commission’s service and mailing lists for the Lundy Project. The NEPA document will include our recommendations for operating procedures, as well as environmental protection and enhancement measures that should be part of any license issued by the Commission. The comment period will be specified in the notice of availability of the NEPA document.

The major milestones, with pre-filing target dates, are as follows:

<u>Major Milestone</u>	<u>Date</u>
Stakeholder Comments on SD1 due	June 24, 2024
FERC Issues SD2 (if necessary)	August 6, 2024
SCE Files Proposed Study Plan	August 6, 2024
FERC Issues Study Plan Determination	January 3, 2025
SCE Conducts Studies	Spring/Summer 2025
SCE’s Final License Application Due	March 1, 2027

A process plan, which has a complete list of relicensing milestones for the Lundy Project is attached as Appendix A.

8.0 COMPREHENSIVE PLANS

Section 10(a)(2) of the FPA, 16 U.S.C. section 803(a)(2)(A), requires the Commission to consider the extent to which a project is consistent with federal and state comprehensive plans for improving, developing, or conserving a waterway or waterways affected by a project. Commission staff have preliminarily identified and reviewed the plans listed below that may be relevant to the Lundy Project. Agencies are requested to review this list and inform the Commission staff of any changes. If there are other comprehensive plans that should be considered for this list that are not on file with the Commission, or if there are more recent versions of the plans already listed, they can be filed for consideration with the Commission according to 18 CFR 2.19 of the Commission's regulations. Please follow the instructions for filing a plan at <https://cms.ferc.gov/media/list-comprehensive-plans>.

The following is a list of comprehensive plans currently on file with the Commission that may be relevant to the Lundy Project.

Federal Plans

Bureau of Land Management. 1987. *Final Environmental Impact Statement for 19 Wilderness Study Areas within the Benton-Owens Valley and the Bodie-Coleville Study Areas*. Department of the Interior, Bakersfield, California.

U.S. Forest Service. 1989. *Mono Basin National Forest Scenic Area Comprehensive Management Plan*. Department of Agriculture, Bishop, California.

U.S. Forest Service. 2004. *Sierra Nevada National Forest Land and Resource Management Plan, Amendment*. Department of Agriculture, Vallejo, California. January.

U.S. Fish and Wildlife Service. 2013. *Greater Sage-grouse (Centrocercus urophasianus) Conservation Objectives: Final Report*. Denver, Colorado. February.

California Plans

California Department of Parks and Recreation. 2013. *Outdoor Recreation in California's Regions 2013*. Sacramento, California.

California Department of Parks and Recreation. 2014. *2012 Survey on Public Opinions and Attitudes on Outdoor Recreation in California Complete Findings*. Sacramento, California.

Project No. 1390-069

California Department of Parks and Recreation. 2021. *California Statewide Comprehensive Outdoor Recreation Plan*. Sacramento, California.

Local Plans

Mono County. 2021. *Mono County General Plan*. Mono County Planning Division, Mammoth Lakes, CA.

9.0 MAILING LIST

The list below is the Commission’s official mailing list for the Lundy Hydroelectric Project (FERC No. 1390). If you want to receive future mailings for the project and are not included in the list below, please send your request by email to efiling@ferc.gov or by mail to: Debbie-Anne Reese, Acting Secretary, Federal Energy Regulatory Commission, 888 First Street, N.E., Room 1A, Washington, DC 20426. All written and emailed requests to be added to the mailing list must clearly identify the following on the first page: **Lundy Hydroelectric Project No. 1390-069**. You may use the same method if requesting removal from the mailing list below.

Register online at <https://ferconline.ferc.gov/FERCOOnline.aspx> to be notified via email of new filings and issuances related to this or other pending projects. For assistance, please contact FERC Online Support at FERCOOnlineSupport@ferc.gov or toll free at 1-866-208-3676, or for TTY, (202) 502-8659.

APPENDIX A**PROCESS PLAN AND SCHEDULE
LUNDY HYDROELECTRIC PROJECT NO. 1390**

Shaded milestones are unnecessary if there are no study disputes. If the due date falls on a weekend or holiday, the due date is the following business day. Early filings or issuances will not result in changes to these deadlines.

Responsible Entity	Milestone	Date	FERC Regulation
SCE	Filed NOI and PAD	2/23/2024	5.5, 5.6
FERC	Consultation Meetings with Tribes	3/25/2024	5.7
FERC	Issue Notice of Commencement of Proceeding and SD1	4/23/2024	5.8
FERC	Scoping and Site Visit	5/23/2024	5.8(b)(viii)
All Stakeholders	File Comments on PAD/SD1 and Study Requests	6/24/2024	5.9
FERC	Issue SD2 (if necessary)	8/6/2024	5.10
SCE	File Proposed Study Plan	8/6/2024	5.11(a)
All Stakeholders	Study Plan Meeting	9/5/2024	5.11(e)
All Stakeholders	File Comments on SCE's Proposed Study Plan Due	11/4/2024	5.12
SCE	File Revised Study Plan	12/4/2024	5.13(a)
All Stakeholders	File Comments on SCE's Revised Study Plan	12/19/2024	5.13(b)
FERC	Issue Study Plan Determination	1/3/2025	5.13(c)
Mandatory Conditioning Agencies	File Any Study Disputes	1/23/2025	5.14(a)
Dispute Panel	Select Third Dispute Resolution Panel Member	2/7/2025	5.14(d)

Responsible Entity	Milestone	Date	FERC Regulation
Dispute Panel	Convene Dispute Resolution Panel	2/12/2025	5.14(d)(3)
SCE	File Comments on Study Disputes	2/18/2025	5.14(i)
Dispute Panel	Dispute Resolution Panel Technical Conference	2/24/2025	5.14(j)
Dispute Panel	Issue Dispute Resolution Panel Findings	3/14/2025	5.14(k)
FERC	Issue Director's Study Dispute Determination	4/3/2025	5.14(l)
SCE	Conduct First Study Season - typically, spring through fall, as necessary	2025	5.15(a)
SCE	File Initial Study Report	1/5/2026	5.15(c)(1)
All Stakeholders	Initial Study Report Meeting	1/20/2026	5.15(c)(2)
SCE	File Initial Study Report Meeting Summary	2/2/2026	5.15(c)(3)
All Stakeholders	File Disagreements/Requests to Amend Study Plan	3/4/2026	5.15(c)(4)
All Stakeholders	File Responses to Disagreements/Amendment Requests	4/3/2026	5.15(c)(5)
FERC	Issue Director's Determination on Disagreements/Amendments	5/4/2026	5.15(c)(6)
SCE	Conduct Second Study Season - typically, spring through fall, as necessary	2026	5.15(a)
SCE	File Updated Study Report	1/4/2027	5.15(f)
All Stakeholders	Updated Study Report Meeting	1/18/2027	5.15(f)
SCE	File Updated Study Report Meeting Summary	2/2/2027	5.15(f)
All Stakeholders	File Disagreements/Requests to Amend Study Plan	3/4/2027	5.15(f)
All Stakeholders	File Responses to Disagreements/Amendment Requests	4/5/2027	5.15(f)

Responsible Entity	Milestone	Date	FERC Regulation
FERC	Issue Director's Determination on Disagreements/Amendments	5/3/2027	5.15(f)
SCE	File Preliminary Licensing Proposal (or Draft License Application)	10/1/2026	5.16(a)-(c)
All Stakeholders	File Comments on Preliminary Licensing Proposal (or Draft License Application)	12/30/2026	5.16(e)
SCE	File Final License Application	3/1/2027	5.17
SCE	Issue Public Notice of Final License Application Filing	3/15/2027	5.17(d)(2)

APPENDIX B
STUDY PLAN CRITERIA
18 CFR Section 5.9(b)

Any information or study request must contain the following:

1. Describe the goals and objectives of each study proposal and the information to be obtained;
2. If applicable, explain the relevant resource management goals of the agencies or Indian tribes with jurisdiction over the resource to be studied;
3. If the requester is not a resource agency, explain any relevant public interest considerations in regard to the proposed study;
4. Describe existing information concerning the subject of the study proposal, and the need for additional information;
5. Explain any nexus between project operations and effects (direct, indirect, and/or cumulative) on the resource to be studied, and how the study results would inform the development of license requirements;
6. Explain how any proposed study methodology (including any preferred data collection and analysis techniques, or objectively quantified information, and a schedule including appropriate filed season(s) and the duration) is consistent with generally accepted practice in the scientific community or, as appropriate, considers relevant tribal values and knowledge; and
7. Describe considerations of level of effort and cost, as applicable, and why proposed alternative studies would not be sufficient to meet the stated information needs.

For more information, see the Guide to Understanding and Applying the Integrated Licensing Process Study Criteria on the Commission's web site (<https://www.ferc.gov/sites/default/files/2020-04/AGuidetoUnderstandingandApplyingtheIntegratedLicensingProcessStudyCriteria.pdf>).
